Location: Taipei & Macau | Languages: Cantonese & Mandarin (Native), English (Fluent)

DevOps engineer operating production infrastructure end-to-end as a single-person team: 24×7 monitoring, container platforms, backup pipelines, CI/CD, and networking. Comfortable working across network, platform, delivery, and application layers.

Experience

DevOps — SHEN NONG SHI, Taiwan (On-site) 2024 ~ Present

Sole DevOps / infrastructure engineer; responsible for all dev systems, monitoring, backup, delivery, and cross-team technical support.

- **On-prem infrastructure foundations:** maintained networking, UPS, NAS, bare-metal rack and tower servers; authored and executed backup & recovery procedures with verification checklists for critical data.
- **24×7 monitoring & alerting:** designed and operated a round-the-clock monitoring platform covering 12 application groups and 60+ services using Prometheus, Grafana, Alertmanager and Uptime Kuma, with Slack-based incident routing and on-call workflows.
- **Cross-team SRE support:** served as first-line SRE for cross-team issues; coordinated with ROS/robotics, ML, frontend, and backend teams to diagnose infra/service bottlenecks and drive resolution.
- **Operated and supported NVIDIA GPU servers** for ML training/inference workloads; handled OS/service health, deployment readiness, and incident triage for production usage.
- **Implemented internal CI workflows** via self-hosted GitHub Actions runners on K3s.

DevOps / Backend — Private Online Course Platform, Taiwan 2024 ~ 2025

Sole Backend / infra engineer; responsible for backend, database, cloud base infra.

- **End-to-end cloud infrastructure:** designed scalable cloud architecture and performed SRE responsibilities for deployment and operations.
- **Core backend development:** led backend delivery of main services and operational tooling needed for production rollout.

DevOps — AnyWay Network (Web3), Remote 2022 ~ 2024

- **Cloud architecture for cross-chain payment gateway:** designed and operated infrastructure for an EVM-focused cross chain crypto payment gateway, emphasizing secure deployment patterns and operational maintainability.
- **Backend & smart contract integration:** built backend services with Python/FastAPI and implemented supporting Solidity smart contracts; integrated service workflows across infrastructure and application layers.

President — NTUT Blockchain Club, Taipei Tech 2022 ~ 2023

- Organized Web3 courses/workshops/meetups; led partner collaboration and sponsorship coordination (e.g., Binance, SecuX, Chainlink, Tether).

Skills

AI/ML Infrastructure: NVIDIA GPU operations, Linux + driver/CUDA runtime basics, ML service rollout/rollback hygiene, capacity & resource awareness.

Containers & Platform: Docker, K3s/Kubernetes, systemd, Linux debugging.

CI/CD: GitHub Actions, self-hosted runner operations, environment separation, versioning.

Observability & SRE Fundamentals: Prometheus, Grafana, Alertmanager, Uptime Kuma, incident triage, runbooks.

Cloud & Hybrid Ops: GCP Cloud Run, IAM fundamentals, Secret Manager, AWS, Azure, Cloudflare; on-prem operations (network/UPS/NAS).

Automation & Config Management: Ansible, operational scripting, configuration consistency and drift control.

Programming: Python (FastAPI, scripting), JavaScript, Solidity (ERC-20 / ERC-721 / EIP-4361), Bash

Education

B.S., Information and Finance Management — National Taipei University of Technology 2020 ~ 2024
